Personal Statement

I'm a Java developer with 2 years of experience, passionate about learning and finding innovative solutions. Technology has always been a part of my life, from my childhood days of troubleshooting bugs in Windows and optimizing my modest hardware. When I switched to Linux, I created automation scripts and customized solutions to streamline my daily tasks. Now, I'm dedicated to software development, constantly seeking effective solutions through continuous learning.

Work Experience

Systems Analyst at Conquest One Mid-Level – September 2021 • Present

Remote – São Paulo

I work as a Java Backend Developer, serving as a consultant for the client HDI Seguros S/A. The APIs I have developed have been deployed in production for use by brokers and partner companies. I have also had the opportunity to develop APIs with external companies to integrate their external system with our company's system.

- I created Java APIs with Spring Boot, following the MVC architectural pattern, for the development of REST APIs.
- I made adjustments and improvements to the company's legacy APIs and monoliths, using Java and Apache Camel, JavaScript with Ajax and JQuery.
- I had the opportunity to use various tools in my daily work, but the ones I had the most exposure to during this experience were Docker, Jenkins, Spinnaker, Google Cloud Platform, and Git, all following CI/CD development practices.

Education

University Cidade de São Paulo – São Paulo

Bachelor's degree in Analysis and Systems Development • (2023 – actual)

Institute PROA – São Paulo
